

\$GetSmart

Web3 Micro-credentials that
Motivate with Micro-finance

What are Digital Badges and why \$GETS tokens?

- Badges are **popular “micro-credentials.”** Users can get ‘badges’ for completing activities, coursework, courses, milestones, etc. They are mostly **carbon neutral**.
- Badges contain **verifiable data** as well as offer social capital – very cool!
- Every **Learning Management System** has a badge system
- IBM introduced badges and **increased test success by 694% in six months, 92% engagement rate** increase in two months
- Badges can also be **Non-fungible Tokens (NFTs)**
- And contain **transferable digital assets**
- Certificates can thus **pay for education**

GETSMART NFT Badges, *New and Improved!*

Who \$GETS tokens and badges?

1. Sponsors create
2. Earners apply
3. Sponsors decide
4. Earners claim.

Who is this "Dr. Josh" aka Josh-sensei or the NFT Professor?

Developed by Dr. Josh, a thought leader for education in Web3

Dr. Josh supporting female motorcycle builder NFTs in Warsaw

Dr. Josh talking about student debt at NFT.NYC in 2022

Josh Lange grew up in poverty in the Midwest and worked his way up from a truck mechanics helper in community college to a Fortune 500 manager, university dean, and global EdTech social entrepreneur.

In 2016 Dr. Josh saw NFT tradable 'game tokens' as a way forward to improve online learning success rates in a coming era of Metaverse and Personalized Learning. Combined with his history as an expert in Multiple Intelligences, socioeconomic, accreditation and qualifications frameworks – and belief that education should also be fun and free - he designed GetSmart with a group of web specialists and professor friends.

As an early NFT innovator with a community spirit, Dr. Josh became a highly respected Web3 community voice, keynote speaker and host of CryptoMondays Global events worldwide: focused on culture, education, art and climate. In 2021 he created the Free Application for Crypto Student Aid (FAFCSA) www.fafcsa.org and founded Digital Financial Aid Corporation to alleviate suffering from those distressed in student debt. GETS Token and GetSmart Badges are licensed for 501c3 purposes by Dr. Josh

What do you need to start?

1. We will help companies and NGOs create their own badges or integrate \$GETS into an existing program; train staff to use the system; and promote nonprofit badges to potential funders.
2. You will manage and seek funding for your own projects. Our aim is to have crypto donors match sponsor funding.
3. We will co-organize fundraisers and collaborate across communities in the areas of digital training, hackathons, and other projects.

Example Badge Project: \$20,000

What is this Ethereum “Smart Contract” thing all about?

Coded Limits to the System

- Each new badge earned will mint 1,000 new \$GETS tokens until 1 Trillion coins or 1 billion badges are earned. This ensures the token supply is limited while connected to the demand ratio for achievements.
- The price of creating a badge will decrease until all tokens are minted, then its free.
- Any expired or unclaimed badges are destroyed and the tokens returned to Sponsors minus a fee
- The nonprofit distributes rewards up to 20% of the minted tokens to sponsors/contributors/gifts
- Note: Opening price. Only the first 9 million tokens are available for donors = US \$1.8 Million
- After 15 June 2023, 20% will be available through the nonprofit and 80% will be offered to the crypto markets so the price will likely increase.
